### DETAILED ACTION

1. Amendment filed on 8/11/2004 is non-compliant because the claims were not listed in numerical order. An examiner's amendment listing the claim in numerical order appears below.

### EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

#### **In the claims:**

1. Cancel
2. (Once amended) [A sigma delta quantizer circuit according to claim 1,]

#### A sigma delta circuit comprising:

a sigma delta modulator configured to operate according to a first clock signal; and

a quantizer connected to the sigma delta modulator and configured to operate according to a second clock signal, wherein the sigma delta modulator is further configured to operate at a fixed output frequency of transitions under one set of circumstances, and to operate at a variable frequency under another set of circumstances.

- 3.[4]. (Once amended) [A sigma delta circuit according to claim 1]

A sigma delta circuit comprising:

a sigma delta modulator configured to operate according to a first clock signal; and

a quantizer connected to the sigma delta modulator and configured to operate according to a second clock signal, wherein the sigma delta quantizer element is configured to operate at a variable clock frequency such that for small input signals a fixed frequency of output transitions is produced and for large input signals a possibly variable output frequency of edges is produced.

4. Cancel

5. A sigma delta circuit according to claim 1, wherein the second clock signal that determines the output frequency of transitions is a variable clock signal.

***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach a sigma delta modulator that operates according to a first clock signal and also a fixed output frequency of transitions and a variable output frequency of transitions based on a set of circumstances or the size (large or small) of the input signal; a quantizer coupled to the modulator is configured to operate according to a second clock signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
